

Reviews, in three seconds

A counter stand your guests touch with their phone. It opens **your** Google review page — already loaded, ready to type. No app, no QR code, no searching for your name. Designed for your business, built and programmed by hand, and built to stay on the right side of Google's and Yelp's rules.

THE PROBLEM THIS SOLVES

Your best guests are the ones you never see again. In season, a large share of the room is visitors — they eat, they leave happy, they drive home, and the review they meant to write dissolves somewhere on the 50. The people who do write reviews unprompted are disproportionately the ones who had a bad night.

Asking works. Asking is also awkward, inconsistent between servers, and easy to forget on a Saturday at eight. And the moment you make the guest search for your name in Google Maps, you have lost most of them: it is a dozen taps of work for something they were only mildly motivated to do.

The whole product is one idea: remove every step between “I’d leave them a review” and the cursor blinking in the review box.

HOW IT WORKS

01 The guest taps the stand

A passive NFC chip sits behind the printed insert. There is no battery, no wi-fi, no power cable and nothing to charge — the phone itself powers the chip for the instant it takes to read it. Every iPhone from the XS (2018) onward and effectively every modern Android reads it with nothing installed and no app open: the guest just holds the phone near the stand.

02 A notification opens your review page

The phone shows a banner; one tap on it and your Google review sheet is on screen — your business name, your star rating, the text box. Not a landing page of mine, not a menu of options. Yours.

03 They write it on the spot

At the table, while the food is still in front of them and the server who took care of them is still in the room. That is the difference between a review you get and a review you don't.

WHAT THE GUEST NEVER HAS TO DO

- | | | |
|--|-----------------------------------|-------------------------------------|
| ✗ Download an app | ✗ Open the camera for a QR code | ✗ Type your business name |
| ✗ Pick you out of three similar listings | ✗ Give an email or a phone number | ✗ Be asked for anything by a server |

THE TWO PIECES

They cover the two moments that matter: while the guest waits, and when the check arrives.

A — The counter stand 8" × 2" · ANGLED ACRYLIC WITH A SWAPPABLE INSERT

Shown at 60 % of actual size. Two tap zones, one at each end, 5.4" apart — far enough apart that a phone can never read the wrong one.

- **The insert is where your business lives.** Your name, your colors, a photo of the thing you are known for. It slides out of the acrylic, so a seasonal change or a new logo costs one sheet of paper — the stand stays.
- **It stays on your counter.** Eight inches of angled acrylic does not walk out in a jacket pocket the way a loose card does, and the angle puts it where the guest is already looking while they wait to pay.
- **Two destinations, your choice on the second.** Google always holds one end; the other is Yelp for a restaurant, TripAdvisor for lodging and tours, a booking link for a rental shop — or Google again.

B — The check-presenter card 2" × 8" · LAMINATED, ONE TAP

- **Sized to be seen.** Check presenters run about 5" × 9", so an 8" card stands well above the pocket and is the first thing the guest sees when the folder opens. A business card disappears inside it.
- **One tap, Google only.** The guest is holding this one in their hand at the single most satisfied moment of the visit. No second option, nothing to decide.
- **One per bill folder** — most rooms run ten to twenty, and they are cheap enough to replace when one gets wet.
- **Light card against dark vinyl,** so it reads instantly in restaurant lighting.

THE DETAILS A MANAGER ASKS ABOUT

POWER AND UPKEEP	None. The chip is passive — the phone powers it for the instant of the read. Nothing to charge, no wi-fi, no pairing, and the chip is sealed under the insert or the laminate, so nightly wipe-downs don't touch it.
PHONES	iPhone XS (2018) and newer read it with the screen on and no app open. Android has read tags natively for years. Older iPhones use the reader in Control Center.
RANGE	About an inch and a half. It has to be a deliberate tap, which is the point — a phone in a pocket never triggers it.
IF YOUR LISTING CHANGES	The chip doesn't hold the Google link directly; it holds a short link of mine that forwards to it. If you rebrand, move, or Google reissues your listing, I repoint it in ten seconds and the stand on your counter keeps working.
WHAT YOU CAN SEE	Because taps pass through that link, I can tell you how many times each piece was actually used. No guest data is collected — the link forwards, and that is all it does.

IT FOLLOWS THE RULES — AND MOST OF THIS CATEGORY DOESN'T

The penalties for review manipulation land on your business profile, not on whoever sold you the device.

NO FILTER SCREEN, EVER

Some competitors sell a middle page: “How was your experience?” — happy faces go to Google, unhappy faces go to a private complaint form. That is review gating. Google prohibits it outright and it falls under the FTC rule on review suppression in force since October 2024. These stands open Google directly; whoever taps it writes whatever they want.

NO INCENTIVES

Nothing is ever offered in exchange for a review — no free dessert, no discount, no raffle entry. Google removes reviews obtained that way and can suspend the business profile that collected them.

YELP, HANDLED THE WAY YELP ASKS

Yelp does not allow businesses to solicit reviews at all, and enforces it with a public Consumer Alert on the listing and a year of lost advertising eligibility. So that end never says “review us” and never opens a review form: it says **Find us on Yelp** and opens your Yelp page — Yelp’s own recommended wording, from the badges they hand out free. It sends people to your listing; it does not manufacture reviews, and I won’t tell you otherwise.

PRICE

\$30 EACH COUNTER STAND One stand for the register, the bar or the patio. Insert designed for your business, both zones programmed and tested, handed over working.	\$15 EACH CHECK-PRESENTER CARD One laminated card per bill folder, programmed to Google. Buy as many as you have folders — five, ten, thirty. No minimum.	\$150 2 STANDS + 10 CARDS Two stands and ten cards. Bought one by one that is \$210, so the set saves you \$60. This is what most restaurants take.
---	---	---

One-time — no subscription, nothing to cancel. Extra stands \$30 each, extra cards \$15, replacement inserts \$10. Sales tax applies.

HOW WE START

01 I bring you a sample Already programmed with your review link and your name printed on it. You tap it, your page opens.	02 You say what goes on it Logo, colors, the second destination. Nothing to send me? I design it from your storefront and show you the proof.	03 I build it and bring it over Usually within a week. Every piece tested on my own phone in front of you before I leave it.	04 I check back A couple of weeks later, with the tap count. If a piece isn’t used, we move it — that part is on me.
---	--	---	---

THE SAMPLE IS FREE AND IT IS YOURS TO KEEP

If it sits on your counter for a week and does nothing, throw it out and we never speak of it again.
